Introduction

In this interconnected world, every transaction which is being performed leaves a digital foot print. This is true not only for worldly transaction but for machines as well. With the advent of IOT, every machine in this world is going to produce a footprint via sensor. Now with such a huge volume of data getting generated, it is imperative to have a futuristic platform which not only has ability to store the data but a simple way to analyze for quicker actionable. This is only possible if all this information and corresponding different types of analysis happens at single place in an integrated way.

ATHENA, Neewee's IoT Enabled Integrated Analytics platform provides a unified and end to end Data Analytics. This secured platform consists of Data Integration and Cleansing Engine, Business Intelligence Reporting, Advanced Analytics, Predictive Maintenance and Machine Learning and NLP Model Repository. The platform is highly modular and can seamlessly integrate into your IT landscape.

Business Benefits

- Faster Implementation and configuration
- Reuse of the Analytics Models ensuring lower risk of cost and schedule slippage
- Open source usage to reduce CAPEX
- Easier decision making with unified view of data analysis
- Reduced costs with option of cloud implementation

Solution Features

- End to end Unified view from Data Integration till Advanced Analytics
- Secured environment with Single Sign on
- Highly Modular design for on-off module usage
- Repository of Industry standard model Repository for IOT specific as well as other domains
- Futuristic platform with ability to easily add new platform features such as Artificial Intelligence based systems
